Identify your cost drivers

Pre-filtration is a crucial step in the multi-stage water treatment process. It has a significant effect on the efficiency of the main treatment and the follow-up treatment.

Did you know that using our filters can reduce the energy costs of your system by a considerable amount?

Are you aware of our products for coarse, fine and finest filtration in water treatment?

Intake → Membrane

Protective filtration → Working filtration

Competitors

We are specialists in manufacturing graduated filter media. Convince yourself of our quality filter elements.

Recognize the potential savings with HYDAC filter solutions

- Reduce costs – not only in the procurement phase
- Reduce energy costs by minimizing pressure loss
- High-quality filtration leads to improved quality of the operating medium → positive effect on efficiency and economic viability of downstream processes

Longer service life with HYDAC filter elements.

Are you aware of our products for coarse, fine and finest filtration in water treatment?

Reduce energy costs

With our filter elements, you can benefit from a very low differential pressure. Even a differential pressure saving of 0.49 bar can produce energy savings of up to €42k, depending on the flow rate.

Coarse Filtration ≥ 200 µm

The dirt trapper PRFS screen basket filter

The hybrid AutoFilt® ATF TwistFlow Strainer

Fine Filtration 200 - 25 µm

The allrounder AutoFilt® RF3, RF4, RF5, RF7

The specialist for low pressures AutoFilt® RF10

Finest Filtration ≥ 25 - 1 µm

The bodyguards for demanding requirements Processamicro filter elements Flexmicron filter elements
